Senior Software Developer

Limelight is looking for a talented and motivated individual to join the team as a Senior Software Developer to help us to continue to develop our industry leading experience marketing application. This individual will be joining a dynamic team of energetic and intelligent individuals focused on delivering innovative solutions for a wide range of exciting customers from a multitude of industries.

If you've got that spark and want to be a part of a dynamic team building something great, we look forward to hearing from you!

The main keywords to look for here are: Java, Spring, Hibernate, SQL, AWS, Tomcat, Maven

If you are a full-stack developer and/or familiar with mobile development, we would like to hear about that too! Keywords: Angular, TypeScript, iOS (Swift)

What You'll be Responsible For

As part of the development team, you will primarily be responsible to build and maintain Limelight's core platform. Of course, there will always be opportunities to contribute in additional ways. In this role, you will play a major part in shaping the technology and overall experience of the Limelight platform our client relies on and interacts with everyday.

You'll play a critical role within Limelight's development team and we want to hear your inputs on how we can solve technical challenges

What You'll be Bringing to The Team

- Solid experience in full-stack development to build enterprise SaaS applications built on back-end Java (with Spring framework) and SQL database hosted in AWS.
- Design and architect new features and solve technical challenges to deliver a robust and scalable platform.
- Familiarity with CI/CD process, unit testing, working with Jenkins.
- Cross-functional collaboration with Product, Sales/Account, and Customer Success teams to ensure alignment, prioritization, and delivery of client satisfaction.

Your Skills

- 6+ years of hands-on full-stack development in Java with experience in Spring Framework and Spring Boot, Hibernate, and SQL
- Working knowledge of AWS (EC2, RDS, Beanstalk, Lambda, RDS/Aurora, CloudFront, etc)
- Experience working with Tomcat, Maven, building APIs
- Strong computer science fundamentals, preferably a degree in Computer Science or similar

- Familiar with common development frameworks / tools (eg. Jenkins, maven, Git, etc)
- Ability to debug, trace back on issues, discover the root cause, and offer potential solutions
- Ability to work on JSP, AngularJS, jQuery, and Vue
- Experience in a start-up environment, you thrive in uncertainties and changing priorities with the ability to focus & prioritize
- Always up for a challenge, picking up new things, not afraid to ask questions, and continuously learning
- Never content with the status quo. You are always looking to automate, augment, and improve processes while following best practices and introducing new technologies as appropriate.

Our Tech Stack

Our platform: Java-based application (Java 11), with Spring Framework (Spring 5) and supporting Spring Boot-based microservices (Spring Boot 2) with Docker. We use PostgreSQL as our database. On the front-end, our legacy application is built with JSP, jQuery, and AngularJS - while our new portal UI is built with Angular 6, RxJS, NGXS, D3.js, SCSS.

Our iPad/iPhone & Apple TV: Native iOS & tvOS App built on Swift 5+ and using Realm for data persistence. We use Bitrise as our CI tool and Fabric (Crashlytics) + Firebase as our analytics/monitoring tool.

We are using AWS as our hosting infrastructure. The platform can be built, tested, and deployed with a single click through Jenkins. While we got the "CI" (Continuous Integration) part down, we are still in the process of building our full automation test suite to get to the "CD" (Continuous Delivery) part.

Our Culture

At Limelight, we strive to make everyday a fun, valuable work experience, where team members are encouraged, supported, and given the chance to do work that is meaningful to them. We have all the perks, sure, but the big thing at Limelight is very simple: we treat each and every team member the way we want to be treated. That means you own your career, and your earning potential is limitless. As a company, we believe in giving you a work experience that you enjoy, that you excel at, and that you can balance with the rest of your life.

Limelight has a vibrant, highly engaged culture that has continued even as we work remotely during these difficult times. While the in-office perks have been temporarily put on hold, our culture of innovation, teamwork, balance and diversity continues as strong as ever.

About Limelight
Limelight's technology and team turn branded experiences into the results brands and agencies need. We partner with some of the world's leading brands to create amazing consumer experiences and dramatically better results, all backed by data and analytics.

A Silicon Valley venture backed company, Limelight boasts more than 25 Fortune 500 brands as customers and is growing every month. For more information, please visit: www.limelightplatform.com.
